

Aleksandr Nikolaev

Independent Python engineer — MCP tooling, LLM workflows & API automation

Remote · UTC+7 · alex555196@gmail.com

ABOUT

I build Python systems that do real work: connect APIs, automate boring pipelines, and wire LLM/agent tooling into everyday workflows. Lately I ship **MCP servers** people actually use in Cursor, ops bots in Telegram, and a practical toolkit for **Google Content API** → **Merchant API** migrations.

I like clear scope, tests, and a first milestone you can accept or reject. I use AI coding tools heavily — and I still own the architecture and the delivery.

SKILLS

- **Python** — scripting, services, automation, pytest / mypy / clean structure
- **AI tooling** — MCP servers, Cursor/Claude agent workflows, OpenAI/Anthropic-style APIs
- **Integrations** — REST, webhooks, FastAPI-style APIs, ETL/data sync, Telegram bots
- **Commerce / feeds** — Google Shopping / Merchant API migration tooling
- **Ops** — scheduled jobs, Telegram alerts, Windows-friendly delivery

SELECTED WORK

Content API → Merchant API migrator

Python · convert / audit / staged upload

- Built a converter and client workflow for Google Shopping feed migration (IDs, amountMicros, ProductAttributes).
- Supports convert, dry-run, HTML audit reports, and delta/resume upload with verify retries.
- Auth via env/credentials only — no secrets in logs.

Forge — freelance operations MCP & CLI

Python · MCP · Telegram

- Hunts public job boards, ranks by skill fit and money signal, pushes actionable briefs to Telegram.
- Pipeline from new lead → proposal → follow-up, with contract/freelance filters.
- Shipped behind a strict quality gate (lint, types, high test coverage).

Echo — explainable time-series anomalies

Python · Matrix Profile · MCP

- MCP server that finds unusual shapes in continuous signals and explains them, not just “value too high”.
- Built for operators who need a reason, not a red light.

Small MCP tools I use every day

Parity · Ops Doctor · Culprit · Ward · Covenant · Loom

- A family of focused MCP servers for refactor checks, host preflight, bisect, safe edits, and automation.
- Same habit every time: tiny surface, tests, something an agent can call without drama.

HOW I ENGAGE

- Independent / contract work, remote-friendly
- Happy to start with a fixed first milestone and a clear walk-away
- Client communication in clear English; internal notes can be in Russian
